IACR Fellows

IACR Fellows are outstanding IACR members, recognized for technical and professional contributions that

• Advance the science, technology, and practice of cryptology and related fields;
• Promote the free exchange of ideas and information about cryptology and related fields;
• Develop and maintain the professional skill and integrity of individuals in the cryptologic community;
• Advance the standing of the cryptologic community in the wider scientific and technical world and promote fruitful relationships between the IACR and other organizations.

Pixel: Multi-signatures for Consensus

Manu Drjver, Sergey Gorbanov, Gregory Neven, Hoeteck Wee

Multi-signatures enable a group of signers to jointly generate a short and efficiently verifiable signature on a common message. They are commonly used in proof-of-stake and permissioned blockchains, where reaching consensus usually involves a committee of nodes signing the next block. Adaptive corruptions, however, pose a common threat to such designs, because the adversary can corrupt committee members after they certified a block (and possibly after they sold their stake) and use their signing keys to fork the chain by certifying a different block, thereby undermining the

New Code-Based Privacy-Preserving Cryptographic Constructions

Khao Nguyen, Hinh Tang, Huaxiong Wang, Neng Zeng

Code-based cryptography has a long history but did suffer from periods of slow development. The field has recently attracted a lot of attention as one of the major branches of post-quantum cryptography. However, its subfield of privacy-preserving cryptographic constructions is still rather underdeveloped, e.g., important building blocks such as zero-knowledge range proofs and set-membership proofs, and even proofs of knowledge of
Open Positions in Cryptology

IACR provides a listing of open positions with a focus on cryptology. To advertise a job opportunity, please use the button to the right.

Submissions should include the organization, title, description, a URL for further information, contact information, and a closing date (which may be “continuous”). The job will be posted for six months or until the closing date. Submissions in other formats than text will not be posted. There can be no attachments.

This is intended to be a free service from an IACR member to the IACR membership. The content of the job posting is the responsibility of the person requesting the posting and not the IACR. Commercial enterprises who want to advertise their openings should identify at least one of their employees who is a member of IACR.

Journal of Cryptology publication model

• Current system
  • Papers appear in an “online first” category before being assigned to an issue
  • The current waiting time in “online first” is 9-12 months

• “Continuous Article Publishing” (CAP) model
  • Papers will be assigned to an issue as soon as they are produced
  • An issue closes once enough papers have been entered into it
  • Papers will be indexed more quickly
  • Starts in 2021
