

What is the problem?

- ▶ Let's share data sets... →
- ▶ Results verification can be cumbersome.
- ▶ Nobody wants to spend time (re-)implementing data parsers or documenting how data is stored.
- ▶ Programming language barriers become problematic.

Let's share data sets...

Hi, cool paper. Would you mind sending me some of your data sets?

Thanks, sure – here is a zip file with everything in it.

How do I interpret the data?

unsigned aligned byte parity (md5) with time major block and trace minor order...how else?

Can you provide a parser?

Sure – here is a Prolog implementation of a parser.

wtf...

Never mind, life is too short.

HOW STANDARDS PROLIFERATE:
(SEE: A/C CHARGERS, CHARACTER ENCODINGS, INSTANT MESSAGING, ETC)

SITUATION:
THERE ARE
14 COMPETING
STANDARDS.

14?! RIDICULOUS!
WE NEED TO DEVELOP
ONE UNIVERSAL STANDARD
THAT COVERS EVERYONE'S
USE CASES.

SOON:

SITUATION:
THERE ARE
15 COMPETING
STANDARDS.

Some upcoming results

SoC AES hardware engine attack.
